1996 - 2000	University of Zagreb, Faculty of Computer Science

Candidate Summary

Davor is skilled full stack .Net senior software developer with 12+ years of experience in primarily Microsoft but also other development technologies. His specialties include wide range of Microsoft products and technologies along with administrative skills needed to set up Windows based development and production environments.

He's skilled in frontend as well as in backend development with excellent integration and data modeling skills including databases, which makes him skilled e2e developer.

He has strong human skills and is able to perform very well in a team and also as a team leader.

Motivation letter   (written by candidate)

I have positive attitude to life and I am always looking to learn new things and improve myself. I am self-motivated and responsible person oriented to a result. Those qualities I have recognized in German society during my occasional business trips.

I am also very kin on Bavarian life style and I frequently caught myself day dreaming of how it would be if I was really there, working and living it day by day.

Considering all the above and the fact that Croatian economics are far from blooming I have decided to give myself and my family a fresh start in healthy environment in which I will move myself to the next level – professionally and personally.

Projects

Project portfolio management system (2013 - 2014)

Type of employment: Permanent employee

Scope of the project was to implement Product Development process of big telco.
Solution was web based with windows authentication and user roles. System was implemented as Asp.Net 4, C# Web Forms using Visual Studio 2010 on virtual Windows server 2012 R2 with Oracle 11.2 database.
Responsibilities included development of Asp.Net web forms and user web controls with JavaScript/jQuery functionalities, creation of business objects on the backend side and data handling on Oracle database using Microsoft Oracle Client.
Agile methodology was used in development, versioned with SVN and issues were tracked with Bugzilla.

CRM development (2008 - 2012)

Type of employment: Permanent employee

CRM development in big telco company including integration via web services, database links and xml feeds with surrounding BSS systems in implementation of new products and services.
Responsibilities included:
- development of Asp/Asp.Net C# Web Forms/JavaScript/jQuery web apps with Oracle database in order to support various customer product activation/change/deactivation processes
- development of new PL/SQL functions, views and packages on Oracle database for handling logic on database level and support database links
- development of SOAP web services, integration with third party web services (SOAP, REST), mocking and integration testing with other surrounding systems
Project was versioned using SVN and issues were tracked with JIRA.

Online booking system (2005 - 2008)

Type of employment: Permanent employee

Project target was development of the nautical booking system used as web portal for clients and B2B platform between booking agencies and fleet operators.
Solution was made using Asp.Net C# with ADO.NET Entity Framework, JavaScript/jQuery for web client side, SOAP web services for integration and MS SQL database for data storage.
Solution included back office desktop application in C# Winforms which was used for booking agents.
Responsibilities included:
- development of Asp.Net web forms with user web controls and data handling using ADO.NET Entity Framework that was used to generate business objects from data model in the database
- development of C# Winforms back office application that was using the same data source as web app
Project was versioned using SVN and issues were tracked with JIRA.

Back office tools with web shop and CMS for medium enterprise (2003 - 2005)

Type of employment: Freelancer / Permanent employee

Scope of the project was to develop complete business solution for medium enterprise company.
Solution was consisted of VB6 and VB.NET desktop applications and Asp/Asp.Net/JavaScript web applications with MS Access and MS SQL databases.
Responsibilities included various development task (desktop winforms, web apps, databases/MSSQL stored procedures) and onsite support at company's premises that included bug fixing, deployment of new versions and system administration in order to support installed products.
